

Nomenclatural novelties : Alexander B. Doweld

Mortierellomycetes Doweld, class.nov.

IF550332

Thallus with anastomosing hyphae, dichotomously branching, with stylospores. Hyphae sporangiferous, sporangiophores coenocytic ab initio to irregularly septate at maturity. Sporangia spherical, multispored; columella lacking or rudimentary. Sporangia terminal, borne on erecting hyphae, ramifications primarily horizontally expanding. Spores globose to ellipsoid or irregular, laevigate or ornamented. Zygosporangia naked or dimpled. TYPE: *Mortierella* Coemans.

Holotype *Mortierella* Coemans.
